

DATA MIGRATION

PROBLEM - MULTIPLE DATABASES - MIGRATION

MIGRATE OR INTEGRATE

Collection of Data from field

Non Database Format

The way a report is presented is mostly in the form of an article with multiple paragraphs. This makes it difficult to put it into **standardised data frames/databases**

reports are difficult because:

Not Standardised

The writing style of one person to another would vary greatly. So the way information is presented in two different articles is not the same

OUR PROPOSAL (KURZGESAGT):

Advantages

- ☞ Break silo system integrate multiple database to create a single database.
- ☞ Integrate system using Rest Api.
- ☞ Allowing you to do analytic on the data from different system.
- ☞ Remove data duplication
- ☞ Gives an opportunity for analytics.

Time Line

- ☞ Understand the system
- ☞ System evaluation
- ☞ Integration timeline
- ☞ Integration completion.

Thank you.
